

Everyday Pond Fish Food

Available Sizes: 225g, 1250g

A nutritionally balanced diet which is ideal for goldfish, orfe, koi and all surface feeding pond fish.

Short floating food sticks which soften quickly and are easily consumed by all fish over 8cm in length. Naturally enhances the colour of your pond fish using Spirulina algae, carrots and krill.

Contains natural ingredients to promote your fishes health including Beta Glucans, immunostimulants and omega 3 oils

Made with high quality ingredients and advanced production processes to ensure easy digestibility and less waste – leading to clearer water.

Feeding

Feed 2 – 3 times each day. Your fish should eat all of the food within 5 minutes. If they don't, reduce the amount you feed in future meals. Take care not to overfeed as uneaten food will decompose and pollute the water, encouraging the growth of unsightly algae.

The amount you need to feed will vary depending on water temperature. At higher temperatures the fish will eat more in 5 minutes than they will in colder conditions.

The nutrients within fish foods will be damaged by sunlight. Store your pond fish foods in an opaque container or in a dark cupboard.

Additives

Vitamin A – 29,000IU/kg

Vitamin D3 – 1,500IU/kg

Vitamin E – 250mg/kg

Vitamin C- 109mg/kg

Composition

FishScience Everyday Pond Food is made from cereals, fish and fish derivatives, yeast, molluscs and crustaceans, vegetables, algae, oils and fat.
