

Pond Flake Food

Available Sizes: 100g, 200g

A complete and nutritionally balanced diet for all pond fish under 20cm in length.

Naturally enhances the colour of your fish using Spirulina and Chlorella algae, paprika and shrimp.

Specially formulated to promote health, easy digestion and long life.

Contains natural ingredients to promote your fishes health including Beta Glucans, Garlic and Omega 3 oils.

Ideal complimentary food for frog and toad tadpoles.

Feeding

Feed a small amount 1 – 2 times each day. Your fish should eat all of the food within 5 minutes. If they don't, reduce the amount you feed in future meals. Take care not to overfeed as uneaten food will decompose and pollute the water, encouraging the growth of unsightly algae.

In the spring many ponds have a big population of tadpoles. Feeding small amounts of FishScience Pond Flakes to the tadpoles will provide them with nutrients to help them grow quickly. Place a few flakes in shallow water where the tadpoles are congregating. You will be able to see them congregating around the flakes as they eat them.

Additives

Vitamin A – 22,000IU/kg

Vitamin D3 – 1,200IU/kg

Vitamin C – 300mg/kg

Vitamin E- 600mg/kg
